4_det_curve_multinet_analysis

February 6, 2020

1 Generate DET Curves specific to the different subgroups of the Balance Faces in the Wild (BFW) dataset.

Uses the data in data/bfw-datatable.pkl to evaluate DET curves of different attributes.

```
[16]: import pathlib
  path_package=f'../'
  import sys
  if path_package not in sys.path:
      sys.path.append(path_package)
```

```
[17]: import pandas as pd
  import matplotlib.pyplot as plt
  import seaborn as sns

sns.set(font_scale=1.1)
  # Load out custom tool for loading and processing the data
  from facebias.iotools import load_bfw_datatable, makedir
  from facebias.visualization import draw_det_curve
  from facebias.metrics import calculate_det_curves
  %matplotlib inline
```

1.1 Load the data

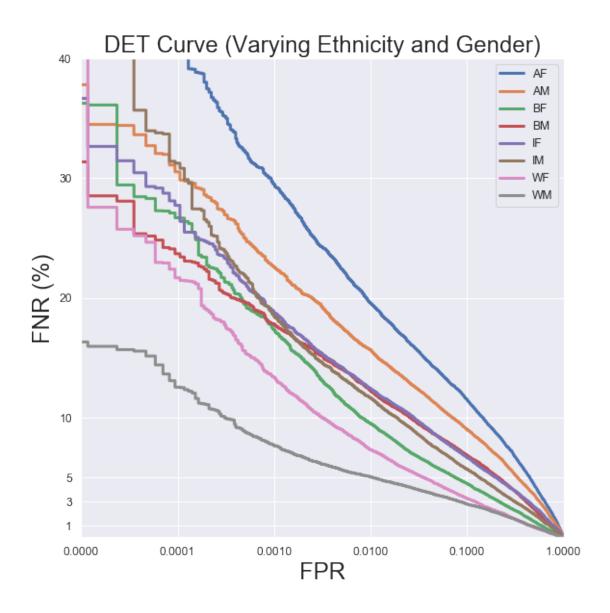

Read in the data as a pandas. DataFrame and show the first few rows.

```
[18]: # datatable (See Load Data)
dir_data = '../../data/bfw-data/bfw/'
dir_features = f'{dir_data}features/sphereface/'
f_datatable = f'{dir_data}meta/bfw-v0.1.5-datatable.pkl'
use_feature = 'sphereface'

dir_results = f"../../results/{use_feature}/"
makedir(dir_results)

data = load_bfw_datatable(f_datatable)
data['score'] = data[use_feature]
data.head()
```

```
